

Endovascular Today - US Device Guide - Liquid Embolics

Company Name	Product Name	Materials Used	US FDA Indicated Use	Comments
Cerenovus	Trufill n-BCA Liquid Embolic System	Trufill n-BCA, Trufill ethiodized oil, and tantalum powder; these components must be used as a system	Embolization of cerebral AVMs when presurgical devascularization is desired; premarket approval device	A clear, free-flowing liquid, which polymerizes quickly on contact with body fluid or tissue; it offers convenient preparation and delivery, customized radiopacity for visualization, and effective penetration of AVMs
Instylla, Inc.	Embrace Hydrogel Embolic System	Water-based PEG hydrogel	Indicated for embolization of hypervascular tumors in peripheral arteries ≤ 5 mm	N/A
Medtronic	Onyx HD-500	EVOH, dimethyl sulfoxide, tantalum	Treating intracranial, saccular, sidewall aneurysms that present with a wide neck (≥ 4 mm) or with a dome-to-neck ratio < 2 mm that are not amenable to treatment with surgical clipping	High-viscosity formulation liquid embolic for the treatment of intracranial wide-necked aneurysms that are not amenable to treatment with surgical clipping
Medtronic	Onyx Liquid Embolic System: Onyx 18 and Onyx 34	EVOH, dimethyl sulfoxide, tantalum	Presurgical embolization of brain AVMs	An ethylene vinyl alcohol copolymer that provides controlled injection and reliability for presurgical embolization of brain AVMs
Sirtex Medical Inc.	LAVA Liquid Embolic System: LAVA 18 (2 mL, 6 mL) and LAVA 34 (2 mL, 6mL)	EVOH, dimethyl sulfoxide, tantalum	Embolization of peripheral arterial hemorrhages	An injectable, nonadhesive liquid embolic agent comprised of ethylene vinyl alcohol copolymer; available in two premixed product formulations with two different vial sizes offering convenient preparation, controlled delivery, and targeted occlusion for providing options for each patient’s specific treatment
